THE SERIES 600 BOLLARDS

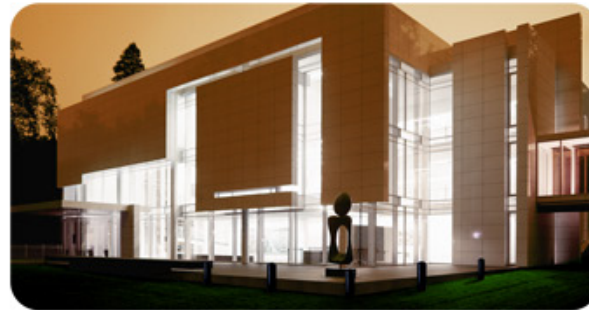

THE LATEST OFFERING AMONG THE RELIANCE FOUNDRY BOLLARD FAMILIES, THE SERIES 600 BOLLARDS PRESENT AN INSPIRED AND CONFIDENT DESIGN THAT DIGNIFIES MOST ARCHITECTURAL OR LANDSCAPE SETTINGS.

Commitment to Quality

An industry leader in the design and the manufacturing of decorative Bollards, Reliance Foundry is proud of our long history and commitment to quality. From concept to production, our significant casting experience is brought to the forefront in all aspects of our customers' experience. Our goal is to ensure that our Bollards excel in functionality, and add real value to our customers' facilities.

Materials

Our Bollards are produced in a variety of high quality metals. Most of the Series 600 Bollards are available in steel; these fabricated versions provide confidence for stand-alone settings, and provide superior strength when used in conjunction with security/anti-ram bollard installations. Some of our Series 600 Bollard models are available in both Cast Ductile Iron and Steel. Cast Ductile Iron is an alloy that is much stronger than standard cast iron; this robust metal is able to withstand the elements and physical abuse that a more brittle cast iron may not. As most of our Series 600 Bollards are produced from recycled metals, sustainable project requirements can also be aided by selecting these models.

BOLLARD DIMENSION CHART

Safety & Design

Most security bollard installations consist of concrete-filled steel posts that are embedded within the grade around many building sites. Reliance Foundry Bollard Covers add a vibrant enhancement to these otherwise ordinary, security/anti-ram perimeter posts. The demand for safety and site protection is high; we take this seriously by providing decorative Bollard covers that are easily installed over top of these anti-ram posts.

CUSTOMIZATION TO MEET YOUR NEEDS

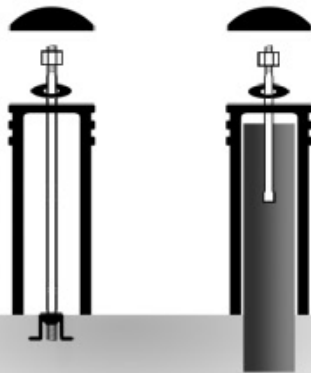

Installation

Mounting options are available for virtually any construction setting – decorative retrofit of existing pipe Bollards, architectural covers for new pipe Bollards, removable bollards for emergency access, or for use as various stand-alone site features. Whether you need your Bollards to be installed on new concrete, existing concrete, asphalt, landscaping or any other surface, Reliance Foundry can supply the means to have your bollards mounted with ease. Our Bollards are quick and easy to install, and come with complete and easy-to-understand instructions. Reduced installation time is one reason why Reliance Foundry's Bollards have become a preferred choice for installers.

Finishes and Accessories

We offer a wide range of accessories and finishing options for our Bollard product line - from various powder coating color options to a variety of installation accessories. The entire surface of our Bollards are machined for consistency before they are professionally powder coated to ensure maximum visual appeal. Reliance Foundry offers the Series 600 Bollards in several standard colors - from our popular, textured "Hammer Black" to a metallic silver finish. In addition to our large selection of mounting options, our powder coated Bollards can be customized to add chain links for maximum pedestrian and vehicular control. Our chain and links can be customized to the same colors as our Bollards to provide a seamless, finished look to your installation.

OUR BOLLARDS SATISFY ALL DESIGN STYLES & CONSTRUCTION NEEDS, THEY ARE QUICK & EASY TO INSTALL, THEY HAVE A LONG & LOW-MAINTENANCE SERVICE LIFE, AND THEY ARE READILY AVAILABLE FROM STOCK WHEN YOU NEED.
